**QUALITY ASSURANCE POLICY**

MecànicaVilaróS.L.is a family company that provides integrated solutions for industrial needs, ranging from design to the start-up and maintenance of machinery, assemblies, tools and machined pieces.

Since its foundation in 1976, the main axes of action, as levers of competitiveness and sustainability, have been the research in the continuous improvement of the processes as well as the renewal in the vision of the business, taking advantage of the synergies that offers the market at all times.

In the short term, we aim to focus our efforts as an organisation on offering speed, reliability, precision and versatility, all of which are crucial in order to be accessible and close to our customers and, ultimately, gain their trust.

With the same goal, and in parallel with the necessary internal actions, we will strive to reach agreements with technological partners and key suppliers within a comprehensive health and safety framework, respecting people and the environment at all times.

Our quality assurance policy encompasses a firm commitment to fulfil all the legal and regulatory requirements, as well as to continuously improve the efficacy of our quality management system.

Management is committed to providing the necessary resources for the effective implementation of this policy and, together with all our collaborators, to proactively monitor its progress to keep the company in a dynamic of continuous modernization.

Sallent, 02 February 2022.
